

## Corporate Social Responsibility

To ensure a quality oriented, sustainable and long term business, we have highest legal and ethical standards for all our business dealings. We have provided equal opportunity to our human capital, also ensuring that the employees are helped with the education for their children. We proactively promote the public interest by undertaking community related activities.

## Customer Care & OSP Training

We have a dedicated customer service and technical support staff and fastest product delivery time in the industry. The experience with the top notch telecom service providers allows us to simplify the choices and bring high tech solutions into a cost effective reality.

Our existing customer base includes all leading telecom and broadband operators in India. We have a team of highly motivated and dedicated customer care team which is totally committed for delivering the best.

"AFS FALCONS", our training team has been successfully conducting customer training and knowledge sharing for complete fiber management solutions and deployments all across India.

Email or call to know the right fiber solutions and products for your custom applications.

## Advanced Fiber Systems

Incorporated in 2002, AFS is providing optimum cutting edge solutions to the telecom industry globally. In a very short time frame we have positioned ourselves as a leading solution provider to the Indian telecom sector.

AFS designs and integrates communication fiber optic and datacom products for voice, video and data applications. We are dedicated to providing you with excellence in customer service and technical support. Our experience allows us to simplify the choices and bring high-tech solutions into a cost-effective reality.

## Fiber Connectivity - Right solutions for You

Get fiber solutions optimized specifically for your application or industry. AFS provides the best in customized fiber solutions while offering a wide selection of products, quality craftsmanship, friendly customer service and fast turnaround.

## Critical Role of Quality Passive Component

In any transmission network systems based on fiber technology the role of Passive and Active network has equal significance to ensure a good uninterrupted traffic for a given bandwidth.

The Active components and systems have a specific life cycle and need replacement every five years or so to be in sync with developing technology. On the other hand the Passive components and systems have comparatively large life cycle and without much maintenance requirements.

The passive components that you choose as intermediates for fiber connectivity are more critical/crucial than you think! **Data loss due to faulty Layer 1 equipment is 40%.** Low cost and off-the-shelf products may serve the purpose in the short-term but do not guarantee consistent low optical loss requirements—an important criteria for efficient and reliable networking.

## Our Strengths

- ◆ R & D in association with premier science institutions for developing cutting edge technology
- ◆ State-of-the-Art manufacturing unit
- ◆ Skilled work force
- ◆ Periodic validation & revalidation of products & processes as per ISO: 9001 & acquiring TL 9000
- ◆ We provide on-site training, resulting in Best Field Practices
- ◆ 8000 sq ft of dedicated assembly line taken care by a team of experts
- ◆ AFS Cheetahs, a team of highly motivated and qualified designers, researchers and engineers for production
- ◆ Quality products with best quality, technology, reliability and design aesthetics
